## 1 Calculating Mean of X, Y for Datasets

The mean is a commonly used measure of center for a given statistic. To calculate the mean, we can use the following formula: for a given indexed set of values, the mean is written:

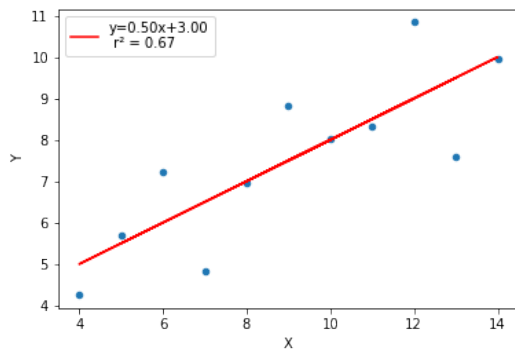

$$\bar{x} = \frac{1}{N} \sum_{i=1}^N x_i$$

Where N is the length of the data set. In other words, the mean is the sum of each value divided by the number of values for a given parameter.

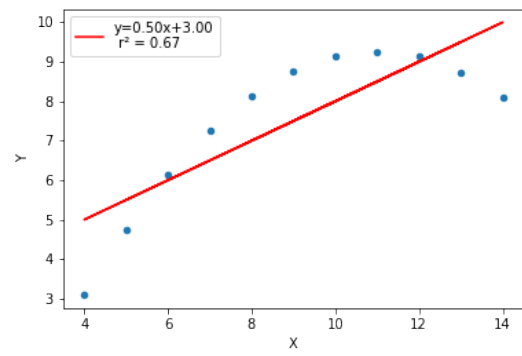

Calculating these values for each dataset we obtain:

	<b>I</b>		<b>II</b>		<b>III</b>		<b>IV</b>	
<b>Data set</b>	<i>x</i>	<i>y</i>	<i>x</i>	<i>y</i>	<i>x</i>	<i>y</i>	<i>x</i>	<i>y</i>
<b>Mean</b>	9.0	7.5	9.0	7.5	9.0	7.5	9.0	7.5
